ERIVA THE VISION TECH NETWORK

INTRODUCING EMVA

The European Machine Vision Association is a non-for-profit and non-commercial association representing the Machine Vision industry in Europe. The association was founded in 2003 in Barcelona by industry representatives from all over Europe as a network to promote the development and use of machine vision technology. The EMVA is a platform for exchange, information and hands-on value for its members. The EMVA is open for all types of organizations having stakes in vision and imaging technologies: manufacturers, integrators, distributors, consultancies, research organizations and academia.

EMVA Key Facts:

- Lean non-profit organization established 2003
- 150 members from about 25 countries
- EMVA Board: 9 members
- President: Dr. Chris Yates (Director, Vision Ventures GmbH)
- General Secretary: Thomas Lübkemeier
- Host of global technology standards
 (GenICam, EMVA 1288, OOCI)

EMVA members – as the owners of the association – benefit from the networking, cooperation and the numerous and diverse activities of the EMVA.

MISSION STATEMENT

by EMVA President Chris Yates

Vision tech is one of the most exciting markets in the 21st century. By combining the power of digital imaging with innovative algorithms and processing, vision tech provides a unique set of capabilities to automatically capture and understand the world, which are used in almost every industry to solve problems and create value for users.

The vision tech sector provi-

des a tremendous amount of opportunity; new applications and new approaches in vision tech are still increasing, even after several decades of double-digit growth of the market.

Whether ensuring the quality of automotive welds, measuring the performance of each pixel in a flat panel display, identifying and classifying parts in manufacturing supply chains, guiding the movement of robotic systems or navigating autonomous vehicles, to ensuring our personal safety while humans work in ever closer collaboration with machines and robots, vision is the key enabling technology.

The vision tech market is supported by some of the most dynamic and fast-moving technical innovations in any sector. These developments continue to expand the scope of vision applications, addressing new sectors and providing simpler, faster, and more autonomous solutions, ultimately providing greater value to end users.

Artificial intelligence and machine learning approaches offer a new paradigm within the vision industry, driven by the availability of high-performance processing platforms and the understanding of the power of neural networks, now being used in many real-world applications. Vision systems are able to see across an evergreater range, with infrared, terahertz, acoustic, radar, lightfield, hyperspectral, and 3D image capture techniques each acting to expand the scope of the industry and combine with existing tools to create new solutions.

Manufacturing and automation systems are becoming ever more connected, enterprise architectures are realizing the dream of Industry 4.0, and the volumes of data continue to grow exponentially, driving the development of new aggregation and information extraction services and products.

Against this backdrop, the European Machine Vision Association continues to represent the interests of its members, promoting the use of vision tech across all sectors and applications, while providing a central European forum for helping understand and shape the direction of the industry.

As the vision industry moves forward in an era of global change, with many new opportunities and an evolving industrial landscape, the EMVA will:

• act as a European forum to inform, understand, and facilitate the development of the vision industry in Europe and beyond,

• work to ensure global standardization of vision technology to ensure a level playing field for all participants and reduce barriers to adoption, and

• seek to promote cooperation between individuals, companies, and associations at every level as the ultimate driver of growth and innovation.

The EMVA looks forward to continuing to play a central role in the future of the vision industry and working with its members, partners, and the wider community to ensure a sustainable future based on understanding, cooperation, and continued innovation to meet the needs of our evolving society.

VISION TECHNOLOGY – KEY TO A BETTER LIFE

One of the simplest ways to understand a machine vision system is to consider it the "eyes" of a machine. Machine vision is the incorporation of computer vision into industrial manufacturing processes using a machine vision system - Machine Vision is anything that helps the computers see and explore the world.

Machine vision recognizes objects, can determine properties, classify objects and make decisions based on this information. Modern machine vision systems use methods and techniques of artificial intelligence (AI) such as machine learning or deep learning and artificial neural networks. Machine Vision is a key technology for the automation of processes in Industry 4.0. In addition to typical industrial applications, machine vision systems can be found in non-industrial areas such as medical, traffic control, biometrics, multimedia and many more. Without the technical revolution of machine vision, many achievements that make life easier and healthier would not have been possible.

The Machine Vision market is one of the fastest growing market segments. According to Verified Market Research, the Global Computer Vision Market was valued at USD 11.88 Billion in 2018 and is projected to reach USD 21.24 Billion by 2026, growing at a CAGR of 7.49% from 2019 to 2026.

The convergence of core technologies and the rapidly growing fields of vision-based applications in a variety of industries will continue to drive growth.

EMVA – SHAPING VISION TECH

The EMVA as a member-supported trade association promotes the growth of the global vision and imaging industry. The development of standards is the key to success and therefore highly relevant for any industry - particularly for the relatively complex and globally distributed machine vision industry. Various global machine vision standards make vision technology less expensive and easier to use.

Digital technology has revolutionized the ability to capture, analyze and use, both visible and non-visible light energy, at high speed. This has enabled to constantly expand the applications of vision technology to automate manufacturing, to streamline and optimize processes, and to drive ever expanding research into our physical environment.

EMVA plays an active role in the development of Machine Vision standards. Currently, EMVA hosts several standards that are globally promoted and widely adopted by the Vision tech industry.

Vision Technology Standards hosted by the EMVA

GenICam

GenlCam (Generic Interface for Cameras) provides a generic programming interface for all kinds of cameras and devices, no matter what interface technology is being used (GigE Vision, USB3 Vision, CoaXPress, Camera Link HS, Camera Link, 1394 DCAM, etc.). By using the GenlCam API, a user has the freedom to select the camera and interface technology that fits best with their requirements wit-

hout the need of changes in their application soft-

ware. GenICam has become increasingly popular and support of GenICam is therefore mandatory in new interface standards like USB3 Vision and CoaXPress.

EMVA 1288

EMVA 1288 is the standard for measurement and presentation of performance specifications for

Machine Vision sensors and cameras. The EMVA launched the initiative to define a unified method to measure, compute and present

specification parameters for cameras and image sensors used for machine vision applications. The EMVA 1288 standard creates transparency by defining reliable and exact measurement procedures as well as data presentation guidelines and makes the comparison of cameras and image sensors much easier. The Standard is developed and extended by a consortium of industry leading sensor and camera manufacturers, distributers and component suppliers.

Vision Standards Meeting 2019

OOCI – Open Optics Camera Interface

OOCI is the Open Optics Camera Interface Standard launched by the EMVA in 2019. The EMVA decided to start a new standardization group on an

open lens camera communication standard, which may have different mecha-

nical connections, but a common protocol closely linked to the GenICam Standard. The goal of the OOCI working group is to standardize the camera interface for optical components inside of, or attached to, machine vision cameras. The optical components covered by this standards effort will include, but not be limited to: Lenses, Filters, Filter Wheels, Shutters, Apertures, etc. Already, major camera and optics manufactures have joined the working group.

EMVA – Host of the International Vision Standards Meeting (IVSM) Spring 2023

Machine Vision engineers from all over the world will meet in spring 2023 for the International Vision Standards Meeting (IVSM) Spring 2023. This meeting takes place twice a year at different locations in Asia, Europe and North America under the global G3 initiative, which is supported by the machine vision associations AIA, CMVU, EMVA, JIIA and VDMA. The last meeting hosted by the EMVA took place in Stresa/Italy on the shores of Logo Maggiore before the Corona pandemic in 2019 together with the corporate sponsor Lakesight Technologies.

The EMVA is a member-owned association. The members guide the development, goals and activities of the association through their elected Board of Directors, comprised of industry representatives working voluntarily and free-of-charge for an election period of three years.

The EMVA's members include all market participants in machine vision at various stages of the value chain. These include manufacturers of hardware components in the field of sensor technology, accessories such as optics and lighting, manufacturers of camera systems, system integrators, software developers, as well as the customers of the members, such as automation companies. The active members of the EMVA also include research institutes, universities, consultancies, media and associations.

EMVA Media Platforms boost business opportunities

As one of the world's largest machine vision associations, the EMVA offers its members a variety of attractive formats that companies can leverage to reach top decision-makers in the industry directly. The monthly EMVA e-newsletter focuses on member news, case studies, product presentations, job offers and industry events and is sent out to subscribers from about 30 countries. More than 50,000 unique visitors each year from all over the world visit the EMVA website and find out about the latest technical and business progress in machine vision. With an average of over 200,000 page views, top machine vision decision makers prefer the EMVA website as their primary source of technical information about EMVA standards, as well as using the Buyers Guide to search for companies, products and services, and gain insight into EMVA's key industry events.

THE WHO'S WHO OF THE VISION INDUSTRY

Today, the EMVA represents the interests of more than 150 active members from more than 25 countries. The EMVA does not only have European-based companies among its members. More than 15% of the member companies, with a growing tendency, have their headquarters in North America and Asia. All members, whether small and medium-sized organizations or large companies, play an important role in the value chain in their respective industries. Science and research institutes and universities also consider EMVA an important platform for their activities: Consultancies, research organizations and academia contribute as active members to the continuous development of machine vision technology.

VISION KNOWLEDGE TRANSFER

Knowledge transfer and education is one of the key factors for success in any technology-based industry. In our globalized world this is more important than ever before. Like other high-tech industries, the vision industry has a high demand for well-educated and well-trained professionals. For many companies this has become a decisive factor for growth. The EMVA has recognized the need for know-how transfer and specific training in the field of machine vision. As part of its association activities, the EMVA offers attractive platforms for presenting new technologies and applications, initiates specialist conferences on new technological trend topics and offers a wide range of technical training courses.

EMVA Technical Trainings and Certifications

EMVA 1288 Know-howTransfer

EMVA 1288 is the standard for measurement and presentation of specifications for Machine Vision

sensors and cameras. Unifying the most important manufacturers, distributors and end users of machine vision cameras the EMVA 1288 working group has elaborated a modular approach to define step by step the measurement and communication of an everincreasing set of performance metrics for image sensing technologies.:

The required level of knowledge is covered by a series of several webinars that have been recorded and are available on the EMVA Training Seminar

Channel. The EMVA also offers EMVA 1288 Certification at user and expert level. The required level of knowledge is taught in two-day courses, offered by several EMVA member companies and provides an industry recognized qualification for those who complete the course.

EMVA Vision Knowledge Transfer Network

Machine Vision Fundamentals

With the "Machine Vision Fundamentals" the EMVA presents a series of articles intended to serve developers and user alike by providing an introduction to various aspects of Machine Vision. The articles are both an entry point for technology and industry newcomers as well as a refresher on selected topics for experienced practitioners.

Guide to Understanding Machine Vision Standards

This comprehensive look at the various global machine vision standards was developed on the initiative of the leading vision associations AIA, CMVU, EMVA, JIIA and VDMA. The brochure covers the various interface, performance, lens mount, lighting and system integrator standards. It is an invaluable one stop reference to all the currently recognized and promoted global vision standards.

Case Studies contributed by EMVA Members

The EMVA offers a broad platform for the exchange of the know-how that EMVA member companies have gathered in solving complex and demanding machine vision applications. The EMVA e-mail newsletter publishes interesting case studies every month, which are collected and made available to a wide audience.

EMVA Vision Knowledge Transfer at Conferences and Shows

Annual European Machine Vision Forum – Where research meets industry

The EMVA's annual two-day event, where ma-

chine vision industry academic reand search meet to learn from each other, gain an understanding of the newest research results, discuss open problems from applications, learn about new and emerging application fields, and enable new research cooperations between industry and academics.

Embedded VISION Europe Conference

Embedded VISION Europe, started in 2017, is the leading conference in Europe focusing exclusively on the areas of this disruptive techno-

logy and organized by the EMVA, supported by Messe Stuttgart, the organizer and host of the biennial VISION international trade fair. Embedded VISION Europe is aimed at developers and users of embedded vision technologies from all industries. The conference accompanied by is an exhibition of tech-

nologically leading companies presenting their embedded vision competence with innovative products, applications and services.

Control Vision Talks

The Control international trade fair for quality assurance, an annual trade show held at the Stuttgart Exhibition Centre, provides suppliers and users with a globally recognized technical event which is focused strictly on relevant issues. At Control the

EMVA in partnership with trade show organizer P.E. Schall and supported by media partner inVISION, organize the EMVA Forum 'Control Vision Talks'. The presentations of

this forum aim to educate the trade show visitor on benefits, applications and methods of machine vision and optical metrology solutions for factory automation.

inVISION Days

Initiated in 2021, inVISION Days in a digital conference for machine vision hosted by inVISION magazine in partnership with the EMVA. Over three days key insights into the vision tech sector are

provided by an comprehensive agenda of lectu-

res, keynotes and panel discussions, in a convenient online format. The EMVA supports the event programme through the highly regarded EMVA Vision Pitches, where selected early stage companies are invited to present their technologies, products, and solutions to the participants and industry players.

PARTNERSHIPS AND INITIATIVES

The EMVA maintains several partnerships with globally organized associations and initiatives in order to promote vision technology and to open a wider spectrum of activities for market participants.

G3 – Worldwide Cooperation on standards

Because developing standards is very time-consuming and many competing standards is counter productive, the EMVA sought cooperation on the field of standards development with other Machine Vision associations. As a result of this EMVA (Europe), AIA (North America) and JIIA (Japan) entered into a cooperation agreement on standards called the "G3" in 2009. Two more associations joined "G3": VDMA (Germany) in 2014 and CMVU (China) in 2015. Through this cooperation in G3, EMVA members have access to the working groups of standards that are hosted by the other G3 associations and standards are developed which benefit from global visibility and implementation.

euRobotics

The EMVA cooperates with the euRobotics AISBL association and is an active contributor at the

European Robotics Forum 2020. The EMVA organizes and hosts the workshop "Vision Tech – Innovation Driver for Robotics and AI" to promote and explain how

vision technology can help solve robotic and automation problems, as well as ultimately help align European-wide strategic roadmaps in vision and robotics.

Photonics21

Photonics21 aims to establish Europe as a leader in the development and deployment of photonics technologies within the various applications fields

such as ICT, lighting, industrial manufacturing, life science, safety as well as in education and training. The EMVA is

pleased that Dr.-Ing. Dirk Berndt has been elected to the Board of Stakeholders (BoS) of Photonics21 in his function as member of the EMVA board of directors. The Board of Stakeholders is the main decision-making body of the European Technology Platform (ETP) Photonics21.

Khronos.org

The EMVA has partner with the Khronos Group to host an Embedded Camera API Exploratory Group. The groups is exploring industry interest in the creation of open royalty-free API standards for control-

ling embedded cameras and sensors. Open to all companies, universities, consortiums, and opensource participants at

zero cost, participants are enabled to discuss use cases and requirements for new interoperability standards to accelerate market growth and reduce development costs in embedded markets using vision and sensor processing and associated acceleration. If the Exploratory Group reaches significant consensus, then EMVA and Khronos will work to develop the proposed standardization initiatives at the appropriate organization.

EMVA NETWORKING PLATFORMS

The EMVA runs a series of events to actively promote networking for members of the association, market participants in the vision industry and companies from related fields. The annual highlight of the Vision industry is the EMVA Business Conference, which brings together the who's who of the industry in a different major city each year.

The EMVA Business Conference

The EMVA Business Conference unites business leaders and technical experts within the Machine Vision industry from Europe and around the world to present and discuss the trends and challenges of our business. It provides a unique platform in Europe for networking, establishing contacts and exchanging ideas. The EMVA Business Conference sets the course for developing and strengthening the industry in Europe and beyond. The annual EMVA Business Conference brings together CEOs, managing directors, corporate strategists, marketing directors, technical managers and other executives of the vision tech industry meet

to exchange market intelligence and news on innovative technologies. The EMVA Business Conference

Previous Conference Locations

year by year visits a different European city. In 2023 Seville in Spain, will welcome the machine vision community.

Networking

Being the most important networking event for the Machine Vision industry in Europe, the EMVA Business Conference offers plenty of networking and personal meeting opportunities. Individual face-to-face meetings can be pre-scheduled using a comfortable registration platform.

EMVA'S NETWORKING GENERATES BUSINESS OPPORTUNITIES

The EMVA continuously looks for new opportunities to promote Vision Tech and to grow the portfolio of benefits for EMVA members.

VISION, Stuttgart

VISION is the world's leading trade fair for machine vision. The who's who in the machine vision industry meets in Stuttgart and present an incomparable range of

products and services: from sensors to processors, from cables to cameras, from software to illumination systems. The EMVA exhibits at VISION 2022 as leading organizer at the International Machine Vision Standards Booth. Machine Vision experts present the most commonly used digital interface standards in the industry in their current versions and stand by for advice on which standard should be used best for a certain application. Furthermore, in good tradition the EMVA hosts the popular 'International VISION Night' event on the evening prior to the fair opening, where the machine vision industry traditionally meets for an informal and relaxing evening with extensive networking opportunities.

Measurement World, France

Our partnership with the

organizers of ENOVA Paris results in the special offer to EMVA members of a reduction on fees for those exhibiting at Measurement World. The biannual exhibition format is dedicated to measurement in its broadest sense. The EMVA contributes to the machine vision presence during the exhibition with a presentation forum, covering topics which include state of the art vision technology, the description of concrete machine vision applications in different industrial sectors, machine vision standards and their objectives, as well as the description of the vision markets in France, in Europe and worldwide.

SPS Italy – The Parma Vision Night

SPS Smart Production Solutions Italy in Parma is the yearly trade show bringing automation sup-

pliers and manufactures together and covering the whole range of products, from electrical components to complete integrated automation systems. First time introduced in 2016 the 'Parma Vision Night' is organized by SPS Italy and the European Machine Vision Association. Representatives of local Italian vision players and globally acting corporations meet annually for the "Parma Vision Night" and benefit from the networking opportunities.

Image Sensors Europe, London / IS Auto Europe, Stuttgart

The EMVA is partnering with Image Sensors Europe in London, Great Britain. Image Sensors Europe established and

held its first conference in 2007, and has since grown to be the go-to annual image sensors technical and business conference. Each year this ever evolving market continuously prompts new and exciting opportunities for the entire supply chain. This esteemed event provides a platform for over 200 representatives from across the digital imaging supply chain to engage in high calibre discussions and face-to-face networking opportunities with key industry experts and colleagues The EMVA provides its members outstanding discounts on conference tickets.
